You can choose battery lights from electricity, etc. to make them easier to use for yourself. Figuring out how to break the lights can be difficult when you need to worry about whether the correct end of the strand will reach the outlet. Use battery-powered lights in the bedroom to hang the lights and turn them on slightly easier. [1] When selecting a battery light, select a replaceable battery and purchase a long-lasting battery. This makes the lighting last longer. 2 Unwrap the lights and test them before you start. Remove from the Christmas-illuminated box and, if necessary, unsoly. If it is electrical, connect the light to an outlet to make sure the light is not broken. If the battery power is turned on, flip the switch to check for damage. Replace the broken bulbs and do not throw away the worn wires before going ahead. [2] 3 Plan how to hang the lights to make sure they are long enough. Sketch how to arrange the lights with pencil and paper. Use the measuring tape to determine the length of the light strand and the length of the light strand. It's from the other side. This ensures that the light mimics the sketch and is long enough to reach the outlet if the light is electric. The lighting that the ceiling intersects the wall must be fixed. Think about whether you want to outline the perimeter of the room with lighting, or tie it across the room in a zigzag pattern from one wall to another. [3] If you don't like the end of a strand of light that goes straight up from the exit, hide it behind a coat rack or arrange it artistically on the wall. 4 Use tape or tack to fix the lights on the wall. You can roll a transparent tape or tack box to climb a staircase or a small ladder. Place a piece of tape over the wires or push the tack on the wall between the wires to secure one end of the light strand to the intersection point on one of the bedroom walls. Continue to protect the strands at different points until the entire strand is secured. [4] If you are performing a perimeter style, secure some of the light strands with tape or tack and move 1-2 feet (0.30-0.61 m) across the wall with strands. Then, at that point, fix the strands again. If you're doing a zigzag pattern, tape or tack the light strands to one wall and move them to the other side of the room with the strands. Then fix the strands on that wall. If you are using a tack, do not push the wires with the tack. This can damage the wiring, which can cause electrical circuits to break and damage lighting. Buy 1 2 boxes of 300 Christmas lights and test them. If necessary, remove the fire from the packaging and let it go. Then, if there is an electrical light, connect it to an electrical outlet, flip the switch over, and turn it on if it is battery operated. Replace and/or repair the problem before moving forward. [5] Electric or battery-powered lighting works on this project. However, battery-powered lighting can be easier to work with because you don't have to worry about connecting. 2 Buy thin curtains and curtain rods. Choose and buy a set of white sheer curtains that you like. Then choose a curtain load who is as close in width as possible to the width of the bed. [6] twin-size bed is 38 inches (97 cm) wide. The full-size bed is 53 inches (130 cm) wide. The queen-size bed is 60 inches (150 cm) wide. The king-size bed is 76 inches (190 cm) wide. [7] 3 Measure and display where curtain rods can be placed. With measuring tape, you measure 1-2 feet (0.30 to 0.61 meters) below the ceiling with the bed and lightly display the walls with a pencil. To make sure the bed is centered, subtract the width of the bed from the length of the curtain rod, or vice versa. Then divide the difference by 2. This is the amount of space that should be on either side between where the curtain rod ends and the edge of the bed. Mark these two spots with a pencil. For example The bed must be 38 inches (97 cm) wide, the curtain rod must be 50 inches (130 cm) wide, and there must be 6 inches (15 cm) between the end of the curtain rod and the edge of the bed. 4 curtains walked down the road. Install curtain rods as if you were installing over a window. Drill the drill starter pilot hole holding the bracket up to the 2 mark indicating where the end of the curtain rod should be. Then screw the screw into the hole with the screw screw. [8] For best results, use a level to determine if the curtain rod is straight. If you can't drill a hole in the wall, try installing two command hooks with weights large enough to hold the curtain rod. 5 Put 16-20 free hanging command hooks under the curtain rod. When the curtain rod is fixed, the command hook makes room evenly across the wall. To do it correctly, read the instructions on the packaging. You will need to press the back of the glue against the wall, peel off the piece of paper on the front, and then push the hook to the front of the adhesive. [9] 6 Drape the fire around each command hook. If the light is electrical, connect it so that it is not long enough to feed and connect the strands to the first hook. If the light is battery operated, all you need to do is connect the 1 end of the strand to the first hook. Then drape the strands under the wall. When it almost reaches the bottom, feed the strands towards the next hook and repeat. [10] Continue this until you hang a fire around each hook. If you have battery-powered lights, don't worry about turning on the switch before you start hanging them. This is only necessary for electric lighting. 7 Break the curtains. Sheer curtains dim the lights slightly and help fake headboards look solid. Remove the curtain rod and slide it through the hole at the top of the sheer curtain. You will walk the curtain load again and adjust the curtains to space them evenly. [11] 1 Buy, unpack and test strands of Christmas lights. After purchasing the light box, remove it and remove it. If there is electricity, connect it to an outlet, flip the switch over, and turn it on when the battery is powered. Make sure all bulbs are working. Fix something that isn't, or get a new strand of light. [12] 1 100 light strands should be sufficient for this project. 2 Hang 2 columns with command hooks on the wall close to both edges. Christmas lights can create zigzag patterns on the walls, so you need to install a damage-free hanging command hook that spreads and stumbles to height. Read the instructions and install the hook as directed. [13] The hook must be installed by pressing the back of the adhesive against the wall, removing the paper on the front of the adhesive, and pressing the back of the hook. Especially if it's long Create more distance between strands, 2 columns of hooks. If the strands are short, the distance between the two row is reduced. 3 Drape the light from hook to hook. If the lighting is electrical, connect the light and import it towards the highest hook you have installed. Otherwise, all you need to do is store the 1 end of the battery-powered light strand on this hook. Feed the strands through the hook and carefully pull them towards the highest hook on the other side of the wall. Connect the strands to this hook, and then pull the strands back to the other side. Keep doing this until you zigzag through all the hooks. [14] 4 Use a clothespin to pin your favorite photos to light strands. Pick out some of your favorite photos and fasten them with a small clothespin to hang them just below the light strands. You can also break other items, such as concert tickets or drawings, to add a personal touch. [15] If you choose to hang something else, attach a small, thin piece of paper. Otherwise, the lights may fall down or break as a result of the need to maintain heavy weights. Add a new question Q How can I put Christmas lights on the wall? This answer to the wikiHow staff editor's answer was written by one of our trained team of researchers who validated accuracy and comprehensive. If you don't want to use nails, try attaching the lights to an adhesive hook or clip. You can also use a few sheets of transparent tape that spread along the string to keep it going. Photo hooks, nails or heavy duty staples also work if you don't mind punching holes in the walls. If you're using staples, make sure the staple's sning doesn't pass through the cord and wanders around the cord! Q How can you hang the lights without damaging the walls? This answer to the wikiHow staff editor's answer was written by one of our trained team of researchers who validated accuracy and comprehensive. Christmas lights can be recycled in many areas. Contact your local city rip waste office or send old lights to companies that recover old holiday lights such as holiday LEDs or Christmas lights. Q Can I hang the lights without nails? Try the painter's tape, thumb, or staple. Different solutions may work to attach to different surfaces. All you have to do is experiment until you find something that works. Thank you for your question! Thanks!
